Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 4, 6, 8-11, 13, 15-17, 19-21 and 31-46 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-24 of U.S. Patent No. 5,883,057 (Roell, Jr. et al). Although the conflicting claims are not identical, they are not patentably distinct from each other because the lubricating oil compositions comprising at least 30% by weight of at least one mineral oil having a kinematic viscosity of less than about 8 cSt at 100°C, and, as additives, (A) from about 5% to about 30% by weight of at least one polymer having a Mn less than about 10,000 which may be a polyalkylene such as polyisobutylene, and (B) at least one additional polymer derived from an alpha-olefin, wherein the lubricant compositions have a shear loss of less than about 15% in the 20 hour taper bearing shear test, may be the same.
